

Australian Sewage Quality Management Guidelines

JUNE 2012

ORIGINATED AS THE NATIONAL SOURCE MANAGEMENT GUIDELINES 2008

COPYRIGHT

WATER SERVICES
ASSOCIATION OF AUSTRALIA

Contents

1. Introduction

1.1 Background

1.2 The 5 key objectives for managing sewage input

1.3 Acceptance criteria

2. Sewage quality management

2.1 Why guidelines are important

2.2 Integrating sewage quality management activities in water utilities

2.3 Pricing trade waste

2.4 Resource efficiency and ecological footprint

2.5 Integrated water management

2.6 Clarity for industry

2.7 Future directions

3. Using the Sewage Quality Management Framework

Element 1: Commitment to sewage quality management

E1.1 Policies

E1.2 Regulatory and formal requirements

E1.3 Engaging stakeholders

E1.4 Initial investigations

Element 2: Assessment of the hazards

E2.1 Describing the sewage system

E2.2 Setting specifications for sewage quality

E2.3 Assessing the sewage system

E2.4 Identifying hazards and hazardous events

Element 3: Risk assessment and control

E3.1 Assessing risk

E3.2 Risk acceptability and treatment

E3.3 Review of risk management effectiveness

E3.4 Control measures

E3.5 Supporting programs

Element 4: Operational monitoring and control points

E4.1 Operational monitoring program

E4.2 Control points

E4.2.1 Critical Control Points (CCPs)

E4.2.2 Quality Control Points (QCPs)

E4.3 Corrective and preventive actions

E4.4 Equipment capability and maintenance

Element 5: Verification monitoring

E5.1 Sewage quality monitoring program

E5.2 Short term evaluation of data

E5.3 Corrective and preventive actions

Element 6: Management of incidents and emergencies

E6.1 Incident and emergency response protocols

E6.2 Communication

E6.3 Incident reporting

Element 7: Employee awareness and training

E7.1 Employee awareness and involvement

E7.2 Employee training

Element 8: Stakeholder management

E8.1 Customer and stakeholder awareness and involvement

E8.2 Communication with stakeholders

Element 9: Research and development

E9.1 Investigative studies, research and development

E9.2 Equipment design and capability

Element 10: Documentation and reporting

E10.1 Managing documentation and records

E10.2 Reporting to internal and external stakeholders

Element 11: Evaluation and audit

E11.1 Long-term evaluation of data

E11.2 Validating processes

E11.3 Audit of the sewage quality management system

Element 12: Review and continual improvement

E12.1 Review by senior executive/managers

E12.2 Plan for improving sewage quality management

Glossary

List of Tables and Figures

Figure 1 Framework for sewage quality management (adapted from AGWR, 2006)

Table 1 Elements of the framework for sewage quality management

Figure 2 Applying the 5 key objectives across the sewage system

Figure 3 Risk management process: an overview

Table 4 Sample qualitative measures of likelihood

Table 5 Sample qualitative measures of consequence or impact

Table 7 Qualitative risk acceptability matrix

Table 8 Sample qualitative measure of uncertainty

Table 9 Examples of factors increasing EC in STPs

Table 10 Methods for detecting saline inflows into sewerage systems

Figure 4 Critical Control Point flowchart

Table 11 Ways to check data is reliable

APPENDICES

Appendix A: Example of a risk assessment for trade waste and domestic sewage

Appendix B: Example of Relative Risk Algorithm – Calculating a Monitoring Program for Industrial Waste Dischargers

Appendix C: Guideline values for non domestic substances

Appendix D: Industry Pollutants

Appendix E: Case Studies

E1 Hazardous Household Waste Management

E2 Trade Waste Operational Monitoring

E3 Management of Toxic Organic Compounds (TOC)

E4 Williamstown Sewerage Catchment Study

E5 Responding to increased salinity – saline infiltration and mitigation options at Bolivar Sewage Treatment Plant

E6 Improving Sewage Treatment Plant (STP) effluent quality for reuse

E7 Amalgam trap study – Improved amalgam waste management in Victoria

E8 Implementation of the Australian Sewage Quality Management Guidelines within the Water Corporation of Western Australia

E9 Managing accelerated sewer corrosion through source control

E10 Managing potential radiation exposure to Sydney Water staff working downstream of hospitals with Nuclear Medicine Departments

E11 Pollutant source control campaign ‘Pets Pests and Pesticides’

E12 How Sunshine Coast Water (SCW) Source Management Team uses conciliation and negotiation to resolve trade waste management issues

E13 Online quality monitoring in sewerage transfer networks

E14 Melbourne Water’s Western Treatment Plant (WTP)

E15 Sewer Mining

E16 Sydney Water’s risk assessment process for trade waste dischargers

E17 Changing characteristics of sewer and sewage quality

Appendix F: Evidence guide for water utilities
