

**WATER SERVICES ASSOCIATION
OF AUSTRALIA**

**Meter Exchange
Code of Practice**

WSA 14—2014

First Edition

Version 1.1

ACKNOWLEDGEMENTS

The Water Services Association of Australia (WSAA) Board would like to express its appreciation to WSAA Members, Associates and staff for their contributions to the creation of the first edition of the Code. Contributions from other industry organisations and individuals are also gratefully acknowledged. In particular the following contributors deserve special mention for their productive work and commitment to the development of this code:

Andrew Geary	City West Water
Alastair McGhee	Barwon Water
Ian McKensey	Hunter Water
Alex Winchester	National Measurement Institute
Thomas Hillebrand	South East Water
Allan Wood	Water Corporation
Garry Peach	Water Corporation
Roy Hallam	Water Corporation

DISCLAIMER

WSAA Codes are published by Water Services Association of Australia Limited on the understanding that:

- Water Services Association of Australia Limited and individual contributors are not responsible for the results of any action taken on the basis of information in the Meter Exchange Code of Practice, nor any errors or omissions.
- Water Services Association of Australia Limited and individual contributors disclaim all and any liability to any person in respect of anything, and the consequences of anything, done or omitted to be done by a person in reliance upon the whole or any part of the Meter Exchange Code of Practice.

PREFACE

The National Framework for Urban Water Metering refers extensively to a Metering Code of Practice, which will comprise a series of Codes that address various aspects of metering. These codes underpin the implementation of the National Framework and ensure a nationally consistent approach to the key areas of responsibility of urban water metering. The National Framework for Urban Water Metering defines **why** the urban water industry should meter the supply and consumption of water. The codes of practice define **what** needs to be addressed in each of the key urban water areas of responsibility. The method of **how** each Code is applied in practice is determined by the policies and processes of the individual water service providers.

This document is the Meter Exchange Code of Practice.

Whilst the framework and associated Codes of Practice are voluntary, the adoption is strongly encouraged to facilitate consistency of urban water metering practices in Australia.

Proposed Amendments

WSAA invites users of this Code and its supporting documentation to propose amendments. An amendment proforma can be downloaded from www.wsaa.asn.au.

To increase the likelihood of suggested amendments being adopted, it is recommended that users of the Code seek preliminary review by and support of a WSAA Member or Associate or other relevant organisation, for example, National Measurement Institute, for inclusion with the submission.

Amendments will be published from time to time on the WSAA website. Users may register their interest so that published amendments can be emailed directly. To register, please submit your name, position, company and contact details, together with the WSAA Code titles in which you have an interest, to codes@wsaa.asn.au.
